

Welcome to today's webinar:

Vaccine Current State & Addressing Hesitancy

Moderator:

John Young, M.D., MBA

Panelists:

Jason Braithwaite, PharmD, MS, BCPS

Michelle Fiscus, M.D., FAAP

Michael Nottidge, M.D., MPH, FACEP

S. Shaefer Spires, M.D.

- Questions will be responded to at the end of the session. Please use the chat feature in your WebEx tool bar to send in your questions.
- Download presentation at www.healthtrustpg.com/education; select “live webinars” and click on the name of this program within the **February 25** calendar listing.
- Visit the On-demand section of the HealthTrust education website for a recording of this webinar by this afternoon.
- Note: This presentation is for informational purposes only and is not intended to replace individual clinical decision-making, which is the sole and independent responsibility of the practitioner. HealthTrust expressly disclaims any liability for treatment decisions. **Please direct any questions or comments to clinical.research@healthtrustpg.com**
- All information provided in this slide deck is up to date as of 2/22/2021. Please refer to source references for future updates to the information.

S. Shaefer Spires, M.D.

COVID-19 | Vaccine Current State & Addressing Hesitancy

The background of the slide is a blurred photograph of a hospital hallway. In the foreground on the left, there is a close-up of an IV drip chamber hanging from a stand, with clear plastic tubing and a blue stopcock. The hallway in the background shows a series of doors and bright overhead lights, creating a sense of depth and a clinical environment.

Welcome & Introductions

Moderator

John Young, M.D., MBA
HealthTrust CMO

Panelists

Jason Braithwaite, PharmD, MS, BCPS
Senior Director, Clinical Pharmacy Services
HealthTrust

Michelle Fiscus, M.D., FAAP
Medical Director, Vaccine-Preventable Diseases & Immunization Program
Tennessee Department of Health

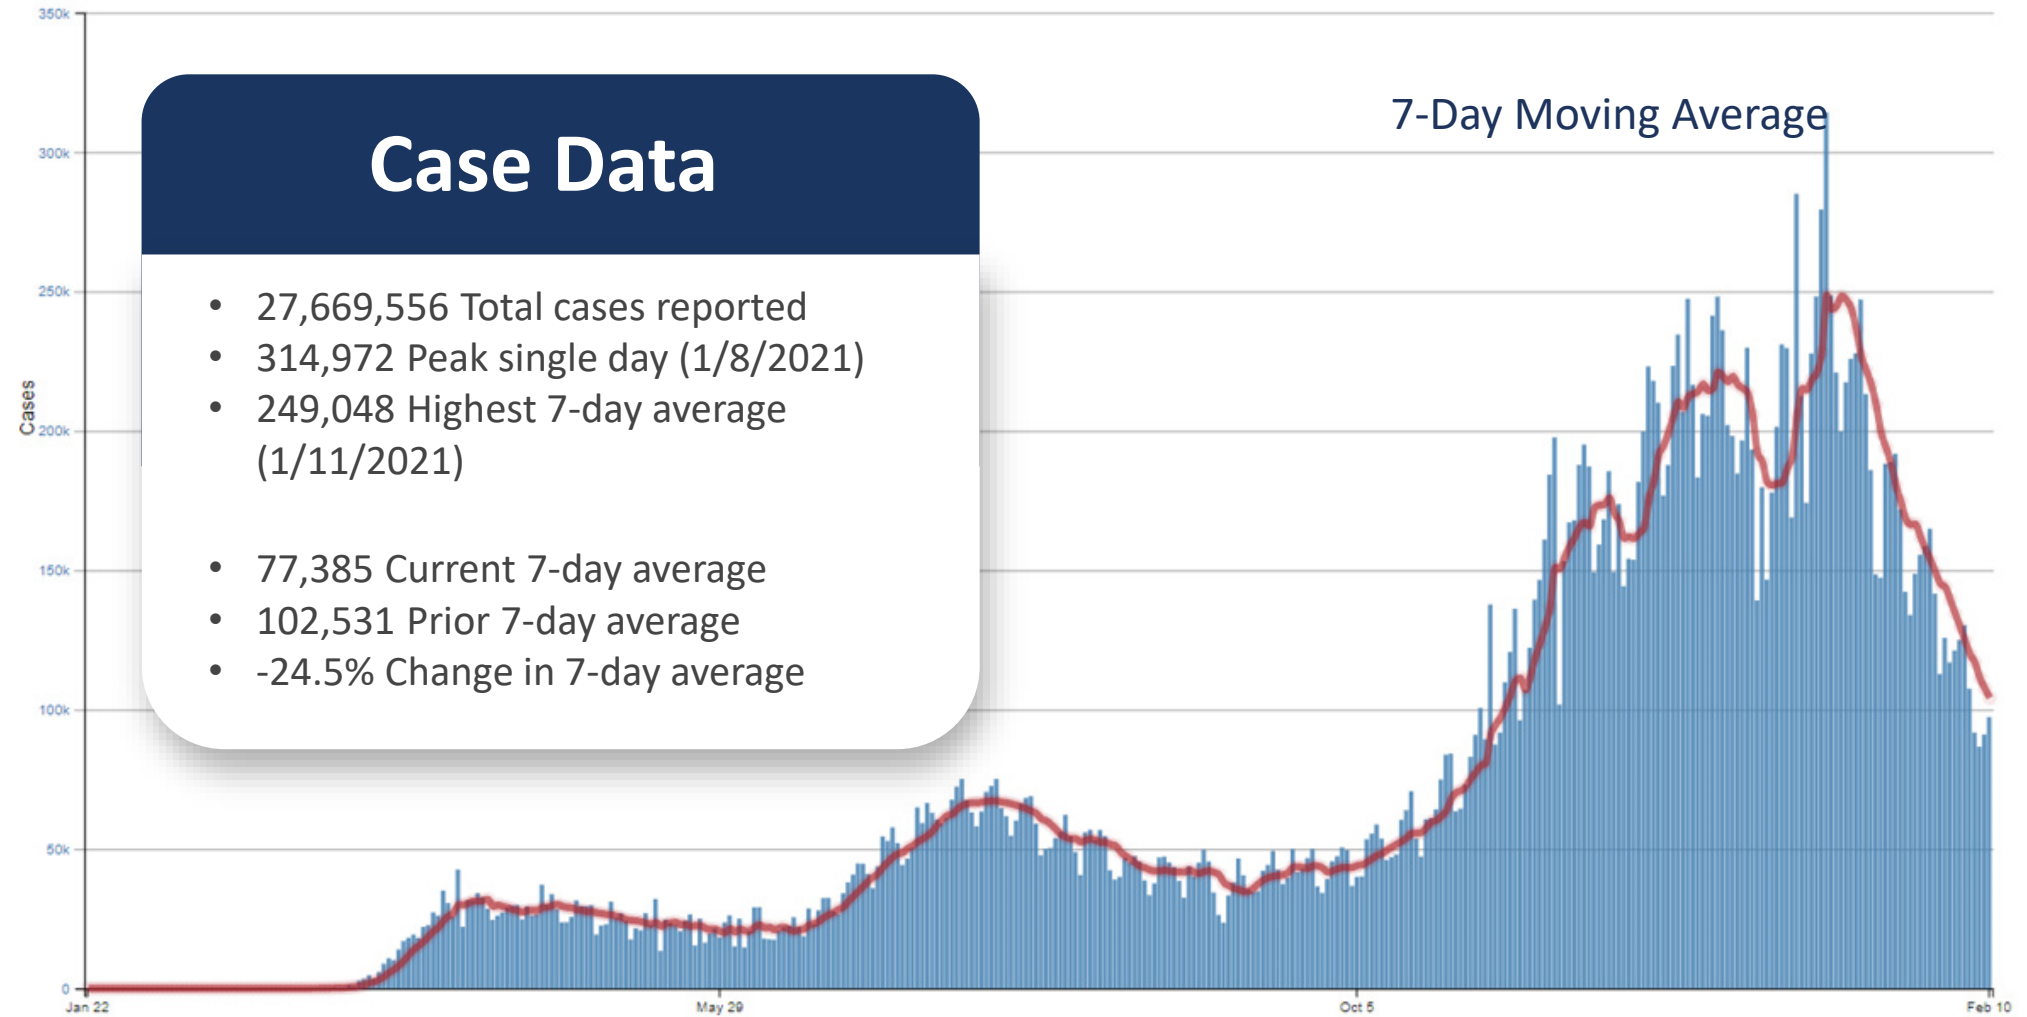

Michael Nottidge, M.D., MPH, FACEP
Critical Care
TriStar Centennial Medical Center

S. Shaefer Spires, M.D.
Assistant Professor of Medicine
Division of Infectious Diseases
Medical Director, DASON
Duke University School of Medicine

COVID-19 Vaccine Candidates

Earliest Candidates in Phase 3 in the U.S. (without EUA)

	Ad26.COVS	AZD1222	NVX-CoV2373
Manufacturer	Janssen	AstraZeneca & University of Oxford	Novavax
Platform	Non-Replicating Viral Vector	Non-Replicating Viral Vector	Protein Subunit
Phase 3 Study Population	<ul style="list-style-type: none"> • ~43,000 participants • Age ≥18 years 	<ul style="list-style-type: none"> • ~30,000 participants planned • Age ≥18 years 	<ul style="list-style-type: none"> • ~30,000 participants planned • Age ≥18 years
Dosing	5 × 10 ¹⁰ vp/0.5 mL IM, 1 dose	5 × 10 ¹⁰ vp/0.5 mL IM, 2 doses, 28 days apart	5 µg + 50 µg adjuvant/0.5 mL IM, 2 doses, 21 days apart
How Supplied	Solution in 5-dose vial	Solution in 10-dose vial	Solution in 10-dose vial
Storage & Stability	<ul style="list-style-type: none"> • 3 months at 2–8°C • Once entered, 6 hours at 2–8°C 	<ul style="list-style-type: none"> • 6 months at 2–8°C • Once entered, 48 hours at 2–8°C or 6 hours at 20–25°C 	<ul style="list-style-type: none"> • 2–8°C
Timeline	Feb 4 – filed for EUA Feb 26 – VRBPAC meeting	April 2021	U.S. & Mexico phase 3 enrollment expected to complete in mid-Feb.
U.S. Dose Commitments	100 million ± 200 million	300 million	100 million
Medicare Reimbursement	\$28.39	1 st dose: \$16.94 2 nd dose: \$28.39	TBD
Efficacy	U.S.: 72% Central & South America: 66% South Africa: 57%	UK: 74% Brazil: 64%	UK: 89% South Africa: 50%

Janssen Phase 3 Interim Analysis

ENSEMBLE 1 Trial

Baseline Characteristic	N=43,783
Age ≥60 years	34%
Male	55%
Race	
White/Caucasian	59%
Black/African American	19%
Native American	9%
Asian	3%
Ethnicity	
Hispanic and/or Latinx	45%
Country	
U.S.	44%
Central & South America	41%
South Africa	15%
Comorbidities	
Obesity	28.5%
Type 2 diabetes	7.3%
Hypertension	10.3%
HIV	2.8%

Outcome (starting 28 days post-vaccination)	Vaccine Efficacy
Moderate to severe COVID-19	66%
U.S.	72%
Central & South America	66%
South Africa	57%
Severe COVID-19	85%

- “Complete protection against COVID-related hospitalization and death, 28 days post-vaccination”
- No reported cases of COVID-19 requiring medical intervention among vaccine participants, 28 days post-vaccination
- In South Africa, 95% of COVID-19 cases were due to a SARS-CoV-2 variant from the B.1.351 lineage
- Fever: 9%; Grade 3 fever: 0.2%
- Serious adverse events were higher in placebo participants vs. vaccine participants
- No anaphylaxis observed

AstraZeneca – UK, Brazil & South Africa Exploratory Analysis

Timing of Booster Dose

Outcome (starting 14 days post-2 nd dose)	AZD1222, n/N	Control, n/N	Vaccine Efficacy (95% CI)
Symptomatic COVID-19	84/8597 (1.0%)	248/8580 (2.9%)	66.7% (57.4, 74.0)
SD/SD	74/7201 (1.0%)	197/7178 (2.7%)	63.1% (51.8, 71.7)
<6 weeks	35/3900 (0.9%)	76/3860 (2.0%)	54.9% (32.7, 69.7)
6-8 weeks	20/1103 (1.8%)	44/1004 (4.4%)	59.9% (32.1, 76.4)
9-11 weeks	11/905 (1.2%)	32/957 (3.3%)	63.7% (28.0, 81.7)
≥12 weeks	8/1293 (0.6%)	45/1356 (3.3%)	82.4% (62.7, 91.7)
LD/SD	10/1396 (0.7%)	51/1402 (3.6%)	80.7% (62.1, 90.2)
<6 weeks	0/15 (0.0%)	0/15 (0.0%)	NR
6-8 weeks	0/12 (0.0%)	0/14 (0.0%)	NR
9-11 weeks	3/624 (0.5%)	20/636 (3.1%)	NR (84.7% calculated)
≥12 weeks	7/745 (0.9%)	31/737 (4.2%)	NR (77.7% calculated)

LD/SD = low 1st dose/standard 2nd dose; SD/SD = standard 1st dose/standard 2nd dose

https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3777268

SD/SD efficacy was lower than LD/SD efficacy (63.1% vs 80.7%)

31% of SD/SD participants had 1st & 2nd doses ≥9 weeks apart & 98% of LD/SD participants had 1st & 2nd doses ≥9 weeks apart

Efficacy increased with longer intervals between 1st & 2nd doses

Suggests higher efficacy with LD/SD was because of longer dosing interval, not lower 1st dose

Variant Update

SARS-CoV-2 Variants

Variant	Emerged	Date	Reported in U.S.	Spike Changes	Benefit to the Virus
B.1.1.7 (201/501Y.V1, VOC 202012/)	United Kingdom	9/2020	12/2020	8 changes in N501Y	Increased transmissibility, but early reports no impact on vaccine efficacy.
B.1.351 (20H/501Y.V2)	South Africa	10/2020	1/2021	10 changes N501Y, E484K, K417T/N	No evidence to suggest impact on disease severity. One of the spike mutations may affect neutralization by some polyclonal & monoclonal antibodies.
P.1	Brazil	12/2020	1/2021	12 changes N501Y, E484K, K417T/N	Increased transmissibility & impact on antigenic profile, which may affect ability of antibodies previously generated through infection or vaccination to recognize and neutralize the virus.

AstraZeneca Exploratory Analyses

Efficacy Against Variant Strains

B.1.1.7 Variant in UK Phase 2/3 Study

Outcome (starting 15 days post-2 nd dose)	AZD1222 (n=4236)	Control (n=4270)	Vaccine Efficacy (95% CI)
Symptomatic COVID-19	52 (1.2%)	198 (4.6%)	74.2% (65.0, 81.0)
B.1.1.7	7 (0.2%)	27 (0.6%)	74.6% (41.6, 88.9)
Other variants	12 (0.3%)	74 (1.7%)	84.1% (70.7, 91.4)
No sequence result	5 (0.1%)	20 (0.5%)	75.4% (34.3, 90.8)
Not sequenced	28 (0.7%)	77 (1.8%)	64.3% (44.9, 76.8)
Asymptomatic COVID-19	96 (2.3%)	112 (2.6%)	15.7% (-10.7, 35.8)
B.1.1.7	6 (0.1%)	8 (0.2%)	26.5% (-112.0, 74.5)
Other variants	6 (0.1%)	24 (0.6%)	75.4% (39.9, 89.9)
No sequence result	21 (0.5%)	16 (0.4%)	-28.7% (-146.6, 32.8)
Not sequenced	63 (1.5%)	64 (1.5%)	3.1% (-37.3, 31.6)

https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3779160

B.1.351 Variant in South Africa Phase 1/2 Study

- “...a two-dose regimen of the ChAdOx1 nCoV-19 vaccine provides **minimal protection against mild-moderate COVID-19 infection from the B.1.351 coronavirus variant** first identified in South Africa”
- “Protection against **moderate-severe disease, hospitalisation or death could not be assessed** in this study as the target population were at such low risk.”

<https://www.ox.ac.uk/news/2021-02-07-chadox1-ncov-19-provides-minimal-protection-against-mild-moderate-covid-19-infection>

The background of the image is a blurred hospital hallway with a series of overhead lights. In the foreground, on the left side, there is a clear plastic IV drip chamber hanging from a stand, with a clear plastic tube leading down to a drip chamber. The overall color scheme is a cool, blue-toned gradient.

Vaccine Confidence

Intent to receive COVID-19 Vaccine – CDC

CDC data reported in Morbidity & Mortality Weekly Report

Nguyen KH, Srivastav A, Razzaghi H, et al. COVID-19 Vaccination Intent, Perceptions, and Reasons for Not Vaccinating Among Groups Prioritized for Early Vaccination — United States, September and December 2020. Further Detail Regarding Hesitancy

CDC Morbidity & Mortality Weekly Report

Additional Data September to December, 2020

- Intent **not** to receive COVID 19 Vaccine
 - Males dropped from 33.8% to 27.8%
 - Female dropped from 42.1% to 36.0%
 - Employed dropped from 38.6% to 32.3%
 - Not employed/Not in workforce dropped 36.6% to 31.5%
- Concern about COVID-19 illness for self
 - Very/Somewhat concerned 27.6%-18.8%
 - Slightly/Not concerned 50.1%-51.3%
- Concern about side effects of vaccine for self
 - Very/Somewhat concerned 43.7%-40.5%
 - Slightly/Not concerned 28.9%-21.5%
- While the data is improving, we have a long way to go

Understanding Herd Immunity

Red = Contagious

Orange = Susceptible (no natural or vaccine-generated immunity)

Blue = Immunity (vaccine or natural)

- Once a high percentage of the community is immune to COVID-19 either due to vaccination or prior illness we can achieve herd immunity.
- We do not know what this number is for COVID-19, however it is being studied.

No immunity. Disease can spread easily from person to person.

People start to gain natural or vaccine-generated immunity. These people are protected for a period of time.

When enough people are immunized, the disease cannot easily spread to susceptible individuals.

CDC COVID-19 *Frequently asked questions about COVID-19 Vaccination*. Available at <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/faq.html> Accessed 2.12.2021

Strategies for Building Confidence in the COVID-19 Vaccines

The National Academies of Sciences, Engineering & Medicine

Strategies for engaging communities to combat mistrust & build confidence

- Form partnerships with community organizations
- Engage with and center the voices and perspectives of trusted messengers who have roots in the community
- Engage across multiple, accessible channels
- Begin or continue working toward racial equity
- Allow and encourage public ownership of COVID-19 vaccination
- Measure and communicate inequities in vaccine distribution

Communication strategies for ensuring demand for & promoting acceptance of COVID-19 vaccines

- Meet people where they are, and don't try to persuade everyone
- Avoid repeating false claims
- Tailor messages to specific audiences
- Adapt messaging as circumstances change
- Respond to adverse events in a transparent, timely manner
- Identify trusted messengers to deliver messages
- Emphasize support for vaccination instead of focusing on naysayers
- Leverage trusted vaccine endorsers
- Pay attention to delivery details that also convey information

Appendix

Novavax UK Phase 3 Interim Analysis

Outcome (starting 7 days post-2 nd dose)	NVX-CoV2373 (n=7,016)	Placebo (n=7,033)	Vaccine Efficacy (95% CI)
COVID-19	6	56	89.3% (75.2, 95.4)
Mild	1	15	Not reported
Moderate	5	40	Not reported
Severe	0	1	Not reported

- Preliminary PCR data show >50% of cases attributable to UK 501Y.V1 escape variant (aka B.1.1.7 variant)
- 62 total COVID-19 cases in interim analysis
- 100 total COVID-19 cases needed for final analysis

Safety	NVX-CoV2373 (n=7,016)	Placebo (n=7,033)
Any severe treatment emergent AE	81 (1.1 %)	53 (0.7%)
Any serious treatment emergent AE	31 (0.4%)	30 (0.4%)
Any medically attended AE	202 (2.7%)	201 (2.8%)

SARS-CoV-2 Variants: Implications for Vaccination

Following vaccination, study participant sera (n=8-20) tested in neutralization assays:

- Pfizer BioNTech COVID-19 Vaccine:
 - Studies demonstrated equivalent neutralizing titers against a panel of 19 individual SARS-CoV-2 spike variants and N501Y (variant) compared to wildtype virus
 - Reductions to neutralizing titers have been noted against the B.1.1.7 variant (all mutations):
 - ✓ 1.3-fold average reduction
 - ✓ 3.9 –fold median reduction
 - One study showed modest reduction (<3-fold) for some with neutralization against certain SARS-CoV-2 spike mutations from B.1.351 and P.1 variants: E484K and K417N:E484K:N501Y
- Moderna COVID-19 Vaccine:
 - One study with modest reduction (<3-fold) for some with neutralization against certain SARS-CoV-2 spike mutations from B.1.351 and P.1 variants: E484K and K417N:E484K:N501Y
 - Another study with no significant impact on neutralizing titers against B.1.1.7 variant, but 6-fold reduction for B.1.351 variant
 - Working on new vaccine for B.1.351 variant
